

## Rail-to-Rail Output, High Quality Audio, Dual Operational Amplifier

### ■ GENERAL DESCRIPTION

The MUSES8832 is a Rail-to-Rail output High quality audio operational amplifier, which is optimized for high-end audio and portable audio applications.

The MUSES8832 features 2.1nV/√Hz low noise, 10MHz wide gain bandwidth, 0.0009% low distortion, 600Ω drive capability, -40°C to +125°C operating temperature range, and various reliabilities and conveniences are improved.

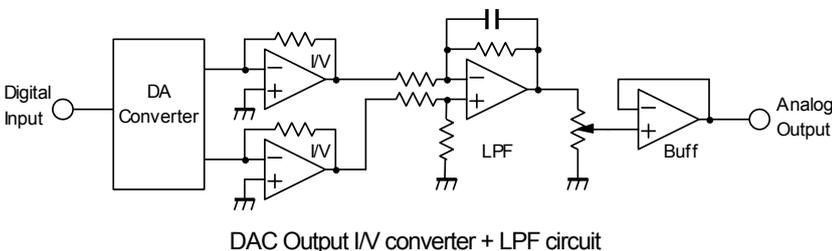

It is the best for audio preamplifiers, active filters, microphone amplifiers, and line amplifiers with excellent sound.

### ■ FEATURES

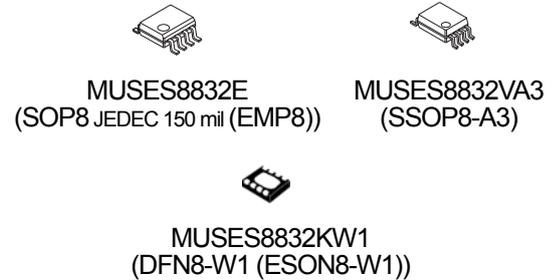

- Operating Voltage                    +2.7V to +14V  
   ±1.35V to ±7.0V
- Low Noise                                2.1nV/√Hz typ. at f=1kHz  
   0.3μVrms typ. (20Hz to 20kHz)
- Output Current                         32mA typ. (Capability of driving 600Ω loads)
- GBW                                        10MHz typ.
- Low Distortion                         0.0009% typ. at V<sub>+</sub>=+5V, V<sub>o</sub>=1.3Vrms
- Slew Rate                                1V/μs typ.
- Bipolar Technology
- Package Outline                        SOP8 JEDEC 150 mil, SSOP8-A3  
   DFN8-W1 (ESON8-W1) (3.0mm x 3.0mm)
- Operating Temperature Range     -40 to +125°C

### ■ APPLICATIONS

- Portable Audio
- Home Audio
- PC Audio
- Car Audio

Input Noise Voltage2	$V_n$	$f = 20Hz$ to $20kHz$	-	0.30	-	$\mu V_{rms}$

## ■ NOTE

1. The closed gain should be 6dB or higher to prevent the oscillation. Unity gain follower application may cause the oscillation.
2. Minimize the load capacitor for the better performance. A large load capacitor CL reduces the frequency response and causes oscillation or ringing.
3. Be careful to the circuit of high impedance. Input bias current influences an input noise and output offset voltage.

## ■ POWER DISSIPATION vs. AMBIENT TEMPERATURE

IC is heated by own operation and possibly gets damage when the junction power exceeds the acceptable value called Power Dissipation  $P_D$ . The dependence of the MUSES8832  $P_D$  on ambient temperature is shown in Fig 1. The plots are depended on following two points. The first is  $P_D$  on ambient temperature 25°C, which is the maximum power dissipation. The second is 0W, which means that the IC cannot radiate any more. Conforming the maximum junction temperature  $T_{jmax}$  to the storage temperature  $T_{stg}$  derives this point. Fig.1 is drawn by connecting those points and conforming the  $P_D$  lower than 25°C to it on 25°C. The  $P_D$  is shown following formula as a function of the ambient temperature between those points.

$$\text{Dissipation Power } P_D = \frac{T_{jmax} - T_a}{\theta_{ja}} \text{ [W]} \quad (T_a=25^\circ\text{C to } T_a=150^\circ\text{C})$$

Where,  $\theta_{ja}$  is heat thermal resistance which depends on parameters such as package material, frame material and so on. Therefore,  $P_D$  is different in each package.

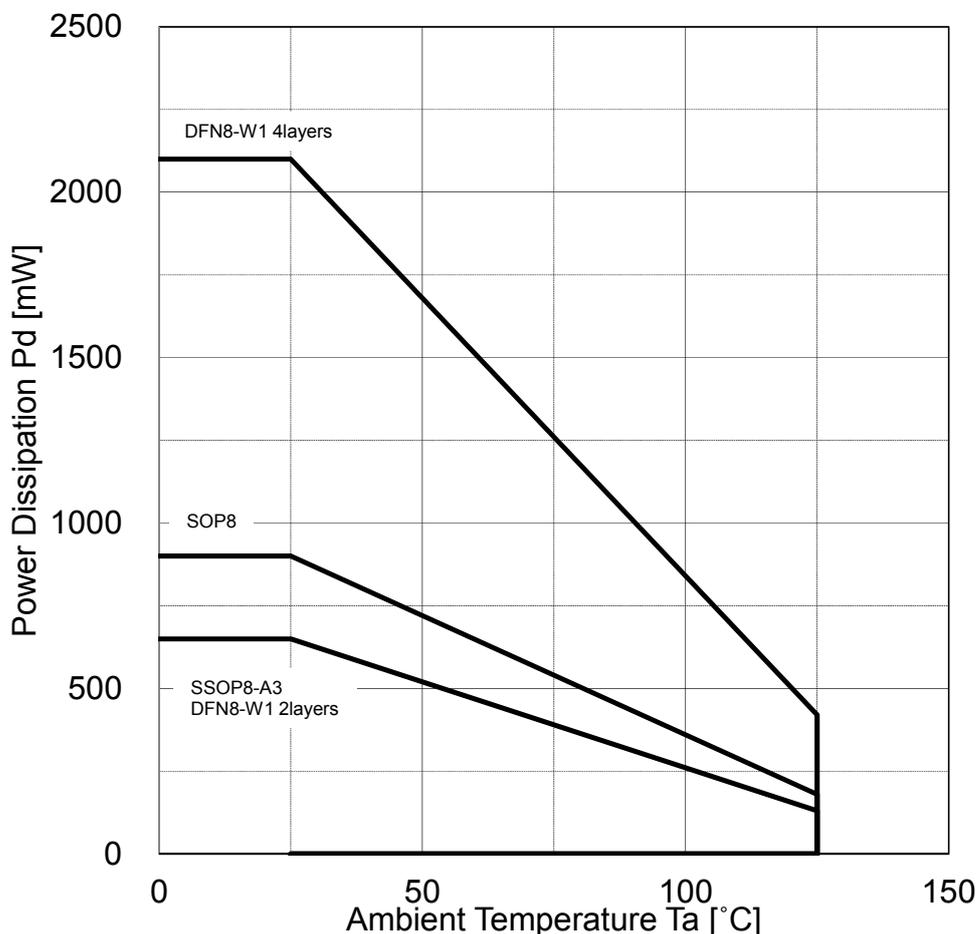

While, the actual measurement of dissipation power on MUSES8832 is obtained using following equation.

$$(\text{Actual Dissipation Power}) = (\text{Supply Current } I_{cc}) \times (\text{Supply Voltage } V^+ - V^-) - (\text{Output Power } P_o)$$

The MUSES8832 should be operated in lower than  $P_D$  of the actual dissipation power.

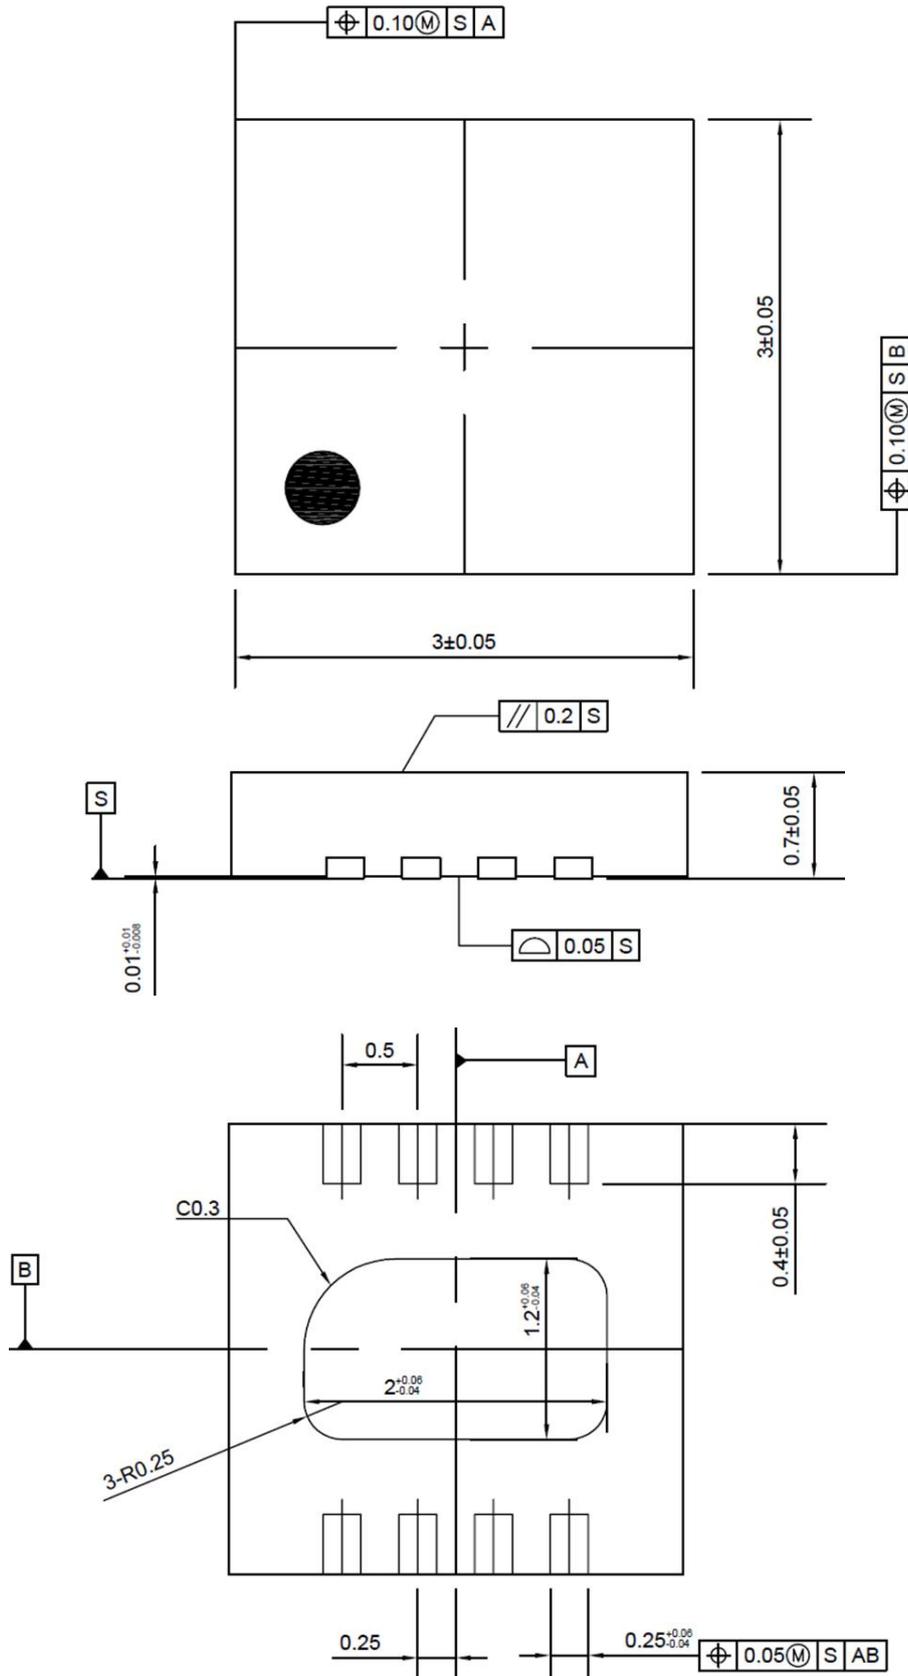

To sustain the steady state operation, take account of the Dissipation Power and thermal design.

## NOTE

### Precaution for counterfeit semiconductor products

We have recently detected many counterfeit semiconductor products that have very similar appearances to our operational amplifier "MUSES" in the world-wide market. In most cases, it is hard to distinguish them from our regular products by their appearance, and some of them have very poor quality and performance.

They can not provide equivalent quality of our regular product, and they may cause breakdowns or malfunctions if used in your systems or applications.

We would like our customers to purchase "MUSES" through our official sales channels : our sales branches, sales subsidiaries and distributors.

Please note that we hold no responsibilities for any malfunctions or damages caused by using counterfeit products. We would appreciate your understanding.

[CAUTION]  
The specifications on this databook are only given for information, without any guarantee as regards either mistakes or omissions. The application circuits in this databook are described only to show representative usages of the product and not intended for the guarantee or permission of any right including the industrial rights.
